Subject: Follow-up test results on your steel conduits

Dear Ms. Stephanie Ellis,

Intertek is pleased to provide this letter report covering the quarterly follow-up testing on your steel PVC coated galvanized rigid steel (GRC) conduit: Plasti-Bond threaded and non-threaded part number PRHCONDUIT-1/2". The samples were received at Intertek on October 05, 2020, for Quarter 4, 2020 follow-up testing and were production samples in undamaged condition.

As part of Intertek's ETL Verified Program for PVC Coated Conduits (PVC-001), the conduits were conditioned during 200 hours as per the method defined in ASTM D 870-09 (Standard Practice for Testing Water Resistance of Coatings Using Water Immersion). It is an alternative practice to ASTM D 2247 (and vice-versa).

Before and after the conditioning period, two (2) standard test methods are used to evaluate the adhesion of both the internal and external coatings.

For the internal coating, we use the standard ASTM D 3359-09: Standard Test Methods for Measuring Adhesion by Tape Test, Test Method B.

For the external coating, we use the section 3.8 of NEMA RN 1 (dated 2005): Polyvinyl-Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.

The testing was performed at Intertek, located in Cortland, NY from October 21 through October 30, 2020 to the Intertek High Temperature H<sub>2</sub>O PVC Coating Adhesion Test Procedure for 200 hours in water at a temperature of 95 °C ± 5 °C and are compliant with the applicable requirements of the test specification. The test results are enclosed to this letter report.

We have appreciated this opportunity to be of service to you. If there are any questions regarding this letter or if you require any other service offered by Intertek, please do not hesitate to contact us.

Sincerely,

Antoine Pelletier

<b>Notes:</b>	Compliant						

\* The internal coating adhesion is tested as per ASTM D 3359-09, Test Method B and is rated as in accordance with the following table.

\*\* The external coating adhesion is tested as per NEMA RN 1 (2005), section 3.8 and is rated as in accordance with the following table.

Rating	Internal Coating Rating	External Coating Rating
0	 or worse	Poor
2	Worse than  but no better than 	Poor – Spotty
4	Worse than  but no better than 	Spotty – Poor
6	Worse than  but no better than 	Spotty
8	Worse than  but no better than 	Good – Spotty
10	No worse than 	Good
